

dStore

dStore is a software solution for POS-systems by POS-SH in Austria. As a business partner Superdata markets this product to retailers in Germany and offers second level support for SIGMA-customers who run dStore as their POS-software. The dStore solution is fully supported by SIGMA and it is also incorporated in the CASH-PLUS offering (see CASH-PLUS). The software is designed especially for the self-service retail business focussing on:

- High reliability
- Secure restart procedures
- Fast handling of high volume transactions
- High customer frequency

The system will handle all typical checkout requirements

Sales functions

- Discounts
- Voids
- Pay-in/pay-out
- POS accounting/operator accounting
- Checkout-scales
- Store accountig
- Electronic journal
- POS administration

The software can be easily customized to the need of the customers' environment. The broad acceptance of dStore ensures the continued enhancement and adoption to changes in the retail business.

Discounts

The various promotions and special discounts that SIGMA offers are handled by the specific dStore functions in the POS-system. The data model of dStore will handle almost all discount types presently in use, e.g. item- and quantity discount, multipack, mix&match, discount on totals, discounts by week day, happy hour, coupons.

Discounts can be granted as a reduction on the item price, discount in percent or amount, items for free, coupons, points and so on.
